**Allowable subject matter**

Claims 1-17 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art neither discloses nor suggests the following limitation, in the combination of the remaining elements disclosed in claims 1 and 11:

- A trigger voltage that is higher than a stationary output voltage is supplied to the discharge load at the start of the discharge of the discharge load, the trigger voltage being generated by superimposing the charge voltage stored in the trigger capacitor on a direct current voltage obtained by rectifying and alternating current voltage by the full wave rectifier, and after the start of stationary discharge of the discharge load, the direct current voltage output by the full-wave rectifier current is supplied to the discharge load such as required by claim 1;
- The voltage of the trigger capacitor is superimposed on the voltage of the secondary winding to supply to the discharge load a trigger voltage that is higher than a stationary output voltage of the discharge power supply apparatus at the start of the discharge of the discharge load, and after the start of a stationary discharge of the discharge load, a direct current power output from the full-wave rectifier circuit, is supplied to the discharge load such as required by claim 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
